

# Systems Training

Organisations across every key industry sector trust Kallidus to develop their systems training courses. Our expertise ranges from fast turnaround template-based high quality courses to help upskill employees quickly, to innovative bespoke content designed in close partnership with the client.

## Provident

### Provident

We developed a short course in just five weeks to introduce learners to the organisation's new Learning Management System. This course was developed in Storyline, using a Rapid e-Learning development process.

# Systems Training

## Motability

We developed a media-rich course to introduce the organisation's 17,000 sales consultants to the process of client enrolment and a new supporting application. The course features a 3D virtual garage which is used to introduce learners to the customer and the supporting application.

# Systems Training

## CAPITA

### Capita

Working in true partnership with Capita, we developed over 10 systems courses and have trained their team to become future e-learning developers. This collaborative project was awarded a Gold E-learning Age Award.

Magnox

## Magnox

For Magnox we developed a course on their Contractor Industry Scheme and Agresso, the system which underpins the scheme, using Captivate to develop the visually appealing content quickly and effectively.

EDF

## EDF

Our challenge for EDF was to design a traffic management system course that would appeal to a very broad global audience, many of whom had limited IT skills and only basic English. For this project, we focused our attention on ensuring learners were engaged through high-impact visual design rather than on interactivity.
